The Mediterranean Diet and Cardiovascular Health: From Research to Culinary Strategy
The traditional Mediterranean dietary pattern, abundant in minimally-processed plant-based foods, rich in monounsaturated fats from olive oil and nuts, but lower in saturated fats from meats and dairy products, is now the most-researched cultural model for healthy eating. So where are we now in the evidence-base to support guidance around the Mediterranean Diet for Americans? In this workshop, one of the world’s most well-known experts on the Mediterranean Diet will present a systematic review of observational prospective cohorts and randomized controlled trials which explicitly reported to assess the effect of the dietary pattern on hard cardiovascular end-points (myocardial infarction, stroke, or cardiovascular death). In short, the available evidence is large, strong and consistent: better conformity with the traditional Mediterranean Diet is associated with better cardiovascular health outcomes. Then a leading U.S.-based Spanish chef, and cookbook author, will demonstrate several recipes and culinary strategies of the Spanish Mediterranean Diet, and explain how these compelling flavors can be shared with patients and simply reproduced in American home kitchens.

Food Insecurity: Why It Matters and How Busy Clinicians Can Make a Difference
Did you know the average food stamp budget is $1.50 per meal? What if our patients’ health issues aren’t a result of their choice of foods but, rather, whether they can afford food at all? Food insecurity is responsible for billions of dollars of preventable illness each year. This session will review the clinical significance of food insecurity, and provide busy clinicians with the tools to “screen and intervene” without running behind schedule. We’ll also demonstrate some delicious and healthful recipes for families with limited budgets.
